PACS numbers: 05.60.Gg, 37.10.Gh, 67.10.Jn, 67.85.De, 99.10.Cd

The vertical axis of Fig. 3 of the Letter was wrongly scaled by a factor of 3.51. The correct Fig. 3 is presented below. This does not affect any statement or conclusion drawn in the Letter.

FIG. 3 (color online). B parameter (see text) as a function of disorder strength. The green dotted line represents the percolation threshold of the speckle potential, and coincides with the change of behavior from superfluid to single-particle transport. The dash-dotted line shows the correlation energy E_c . Error bars represent statistical errors.
