

Existing roof structure of the bunker.
Top beams were dedicated to protect the main slab from bombs deflagration.

Balanced ventilation system with heat recovery.

Optic fibers and electric system.

Data storage.
Standard dimensions of a rack : 60x120x200cm
Direct contact liquid cooling allows a higher rack density, overall reduced power use and significantly higher performance potential.

Servers cooling system distribution.
Heated water rejected by the servers is used in a district heating system.

Metallic gantries hung to the ceiling and on the lateral walls of each submarine pen.

Public pedestrian and cycling bridge.
The new facade of the data center allows the pedestrians to discover the physical expression of the Cloud.
