Accepted for publication 31 October 2023

The paragraph starting at the end of page 6 in the original article should read:

Finally, we use the relation (51) to eliminate  $c_2$  in the boundary condition (31), yielding an equation for  $c_1$ :

$$7k^2 \cosh(ka) c_1^2 - 24 \sinh(ka) c_1 + 24\delta a = 0. \quad (52)$$

The solution is

$$c_1 = \frac{12 \sinh(ka) - \sqrt{144 \sinh^2(ka) - 168a\delta k^2 \cosh(ka)}}{7k^2 \cosh(ka)}. \quad (53)$$

Here, the sign for the square root in (53) is chosen such that  $c_1 \simeq a\delta / \sinh(ka)$  in the limit of a small perturbation.

These errors had no impact on the remaining part of the original article.
